ADHD PROJECT
Specific requirements
Functional

Requirement specification	RF-001
Requirement Name	Collect data
Description of the requirement	The system helps the user to collect data through a system where the user has to enter certain fields

Requirement specification	RF-002
Requirement Name	Tools
Description of the requirement	The system has a set of tools that help the teacher to create activities for the student.

Requirement specification	RF-003
Requirement Name	Training System
Description of the requirement	The system has a training section for the teacher oriented towards the progress they have in dynamic activities with children with ADHD

Requirement specification	RF-004
Nombre del requerimiento	Activity Log
Description of the requirement	The app must allow teachers to log the activities the child participates in during the school day.

Requirement specification	RF-005
Requirement Name	Activity Tracking
Description of the requirement	The app should allow teachers to track the child's progress in their activities and provide feedback.

Requirement specification	RF-006
Requirement Name	Error Messages
Description of the requirement	The system should display error messages when certain fields are not correct.

Non functional

Requirement specification	RNF-001
Requirement Name	Maintainability
Description of the requirement	The system is implemented in such a way that it can be easily modified as updates can be made in the future to add new information or new content.

Requirement specification	RNF-002
Requirement Name	Graphical user interface
Description of the requirement	The system should have an interface that allows users to understand it just by looking at it and using it without complications.

Requirement specification	RNF-003
Requirement Name	Legible fonts
Description of the requirement	The font used in the system should be clear and legible for all users.

Requirement specification	RNF-004
Requirement Name	Colors in the software
Description of the requirement	The system should have colors that are pleasing to users.

Requirement specification	RNF-005
Requirement Name	Friendly and understable
Description of the requirement	The system contains elements that are easily recognizable for all users and help make the user experience more friendly.

Requirement specification	RNF-006
Requirement Name	Optimized
Description of the requirement	The application should not consume too many resources, so it can be run on more discrete computers.
